Sprint 3 Review

Team: Scrum of the Earth
GitHub: https://github.com/RMIT-SEPT/majorproject-7-tues-14-30-7

REVIEW:
The Sprint Goal was:
- Create a minimum viable product with the ability to log in, view and book with businesses, view a dashboard as a worker, such that all major aspects of the project are functional, and while incorporating CircleCI and Docker under AWS. Past features that require more development will be included in this Sprint.

**Status Overview:**
Sprint 3 had 5 new tasks to complete:
- Log in as a user (34)
- Book with a service (20)
- Search for a business (39)
- Modify service details (2)
- Incorporate Docker and CircleCI under AWS

Including tasks from previous Sprints.
Some features have been left while very close to completion, leaving room for flexibility and adjustments in later Sprints.

Sprint Statistics
- With a predominantly High or Very High estimated story point value for the tasks of this Sprint, a greater amount of time was required compared to past iterations.

- Despite more challenging tasks, the development team maintained a consistent rate of work, steadily decreasing required effort with a spike between the 8th and 10th

day, and a plateau between the 16th and 18th when dockerisation and AWS deployment occurred.
