Date: 03/9/2020
Scrum Master: Callum
Development Team: Adrian, Giacomo, Matthew, Sovatharo

TASKS:
Sprint 3 has 5 new tasks to complete:
- Log in as a user (34)
- Book with a service (20)
- Search for a business (39)
- Modify service details (2)
- Incorporate Docker and CircleCI under AWS

Backlog #	User Story	Sub-Tasks	Developer Assigned
34	As a customer I want to be able to log in so that I can book multiple appointments on one account	Create Session backend model and service. Implement Token handling for managing sessions Add Login front end page Create session API Implement handling for expired sessions Ensure the login feature adheres to security principles (xss, etc)	Matttew (Back-End) Sovatharo (Front-End)
20	As a customer I want to be able to choose from numerous services so that I can book the exact one I require	Add booking page Add booking API	Matthew (Back-End) Sovatharo (Front-End)
39	As a customer, I want to be able to search for a business so that I can view a friend's recommendation	Convert search bar in header to component Add search results page Add search functionality based on name or description Route to business pages from search results	Callum Ackland
2	As a business owner I want to be able to adjust working times for the coming month so that I can plan shifts	Create business times api Minimal front-end design Finalised businessPage worker dynamic worker table	Adrian Vong

			Show business hours on businessPage Html forms to edit and save/update data from database.	
57	As a worker I want to be able to set my availabilities so that I am not rostered when I am not available	Create Interface for setting availabilties Create Axios Patch request so that availabilities are saved Manage components on worker page so that they are responsive Retrieve original information of availabilities with axios get request	Giacomo Pirrone
43	As a new user I want to be able to register so that I can login as a customer and use the services provided.	Create user backend to handle proper sign in data and reject incorrect signup user data. Create registration page on front end. Create a axios post to the user registration backend. Handle incorrect signup details and alert user.	Sovatharo Huy
