Milestone Summary:
Sprint 2 and 3 focused on enhancing existing features and adding new and integral ones. Users can now create accounts and login to see a personalised home page. The project has been made more secure through the addition of Spring security. A search page aids user experience by allowing visitors to search for services they wish to book with, and the webpage has been fully routed thus far to link to business pages, worker and user dashboards, edit business pages etc. The extra time spent in Sprint 1 on writing additional user stories has meant no new ones have been required at this stage. Reliability was a focus in the 3rd Sprint, and while new features were implemented, there was an equally strong emphasis on thorough testing of both the front end and back end.
